**AutoCAD History** The first AutoCAD was developed in 1982 as a graphics program for the IBM personal computer, and then ported to other personal computers and microcomputers. Because of the high cost of drawing-board furniture and graph paper, AutoCAD was designed to be used on a desktop. It was launched as a professional version of the drafting program Micro Station, which had been developed by Computer Sciences Corporation (CSC) in the early 1970s. It offered many improvements on Micro Station, which, however, did not work on the then-newly released IBM personal computer. Although AutoCAD was a commercial desktop application, it was not the first software to be designed for the personal computer. Earlier, Albrecht von Haase had developed Draft, a two-dimensional drawing program for the Apple II, which offered several advantages compared with earlier CAD programs such as MicroStation. However, the Apple II was not very widespread and not very powerful, and many engineers continued to use the older MicroStation or other off-the-shelf drafting programs. In addition, the Apple II's high cost made the hardware a substantial part of the CAD user's total software investment, which made people reluctant to buy it as their first personal computer. In 1981, AutoCAD's developer, Steve Bush, left CSC. At the same time, the relationship between CSC and Autodesk began to deteriorate, as Autodesk began to grow rapidly and CSC did not. In August 1983, Autodesk's Steve Bush won a new contract to create a new version of Micro Station, to be called AutoCAD. Unlike the previous Micro Station, it was a full-blown two-dimensional CAD program, and AutoCAD became Autodesk's first commercially released product. After it was released, Micro Station became AutoCAD's sister program, but most users still regarded it as a separate product. The first version of AutoCAD, version 1.0, was released in December 1982. It had many limitations, however, as it only worked on the IBM personal computer and did not yet support the newly released Apple Macintosh. The price of the 1.0 release was US\$499.00, and there were limitations to the number of features available. The Macintosh was released in 1984 and Microsoft's Windows was released in 1985, but the new operating system did not have good drivers for the graphics chips of the IBM personal computers, so 3D CAD was not

Command-line operations, which include processes that start or stop AutoCAD from the command line. They are useful for automation and debugging. History AutoCAD was originally developed in 1988 by Al Balsley and Tom Ward. Development was completed in early 1989 and the first public release was version 1.0. The first AutoCAD release included only command-line driven functionality, but later it was also capable of using the graphical user interface (GUI). Following the release of AutoCAD version 4.0 in 1994, the program was bought by Autodesk in 1995. The program was released as "AutoCAD" (originally "Autodesk AutoCAD") with the exception of versions 4.0 and earlier, which were released as "AutoCAD LT". The original system of organization of the content of AutoCAD was the drawing area. Version 4.0 changed the drawing area to a perspective view. In this way the drawing area was removed from the drawing area context and from that moment it became the new default perspective. Go to ArcGIS Explorer and sign in. Right click the table of contents, select "new layer" and select "vector data". Open the file "US-Mascot.shp" and select a point, then right click. If you want the US-Mascot.shp file to be saved in the same folder, it would be a good idea to select "Save as" and save in the same folder as the shapefile. To use the tool: 1. Select the tool "Select US National Mascots" from the Geoprocessing tab. 2. Select the shapefile containing the national mascots in your document. 3. Choose where to save the selected features. 4. Optional: Set the options. 5. Start the tool and wait for it to finish. If you want to use the tool to merge all national mascots into one polygon, you have two options: 1. If you select an individual Mascot feature, you have the option to "Save the selected feature(s) as a new shapefile".
