To date little information about the influence of psychotropic medication and pregnancy on fertility exists. This article will review the current state of evidence regarding whether or not psychotropic drugs influence human female fertility. The main focus will be on the effects of atypical antipsychotic, hypnotic and antidepressant drugs on reproductive health in women. Female animals exhibit side effects such as fertility impairment related to antipsychotics and antidepressants. In contrast, at least for antipsychotics, no such evidence is apparent in the human population. However, available data, along with the animal data, suggest that antidepressant and hypnotic drugs may have some toxic effects on fertility. Further studies are required to clarify the influence of antidepressant and hypnotic drugs on fertility.
