Category:AutoCAD Category:AutodeskQ: Optimising 1-Minute Playout of a 120Mbit Video I have a video file that is 36Mb. I want to make sure that it plays back for around 1 minute. What algorithm should I use to optimise the playback rate of the file?
A: I can't really answer your question, but here are some resources for you. One of the more popular options to optimize for re-playability is to convert your video to a "sliced" MP4. The "slicing" is basically the process of creating "time segments" and rendering only those slices that need to be "played". There are a few options for slicing a video. Probably the most popular is the H.264 Slicer (see this discussion) and a few other options are offered in the following discussion: MP4/AAC Slicing for Video on Demand If you want to use the H264 Slicer you may find this web site useful: If you only have one slice per minute, this may be an easy solution. It will be easier to create a master copy with the smallest amount of slicing done (i.e., no slicing) and then you can distribute that to clients for them to "fill in" the missing slices. If you have multiple slices per minute, there are a number of other options. A: Audio-only solutions mp4splitter is a command line tool that can splice MP4 files to make it "flow". As this question is tagged "Javascript", you can use JWPlayer, which works in all browsers and supports multiple formats. You may find ffmpeg and ffprobe useful. Q: Looking to make a python script that does only one thing I was looking for a program that runs on Linux, Mac or Windows, that would run on any of them and simply lists the network interfaces available on the machine and the IP address of each one. I found a few options online but they all seem to be quite complicated (trying to do the same thing on Windows involves running a whole bunch of batch files and I'm hoping I can just run a single.py script). I was wondering if anyone knew of something simple that would do this job? A: The -I option of the ip command is what you want. It's the same as the -A option on ifconfig. If you want to get all available interfaces (including loopback and null interfaces), run: ip -A If you just want the non-loopback interfaces: ip -A -n If you want the raw output, then add -o to get just the address. You can also pipe it into your favorite text editor: ip -A -n -o | sed '1,/^[0-9.]+:/d' ## Copyright (c) 2014, 2018, Oracle and/or its affiliates. What's New in the AutoCAD?

Navigate easily between the new markup features: Automatic markup allows you to quickly start editing a file's content. You can open a content-rich drawing or closed view directly from a closed file. With this release, we introduce automatic markup features: you can open content-rich drawings or closed views directly from a closed file. Built-in 3D printing workflow: You can easily print 3D-based models using the Printer Manager. Choose the right paper type for printing and save the settings for future prints. Graphical User Interface: New controls and icons for navigation and tool tips, as well as new templates, cascading windows, and floating panels for design or work. In addition, AutoCAD adds a new cloud-based hosting service for designers and content creators. Designers can work together and easily share, access, and publish their designs in the cloud. You can instantly access, edit, and publish from anywhere in the world. PDF Import: You can import PDF drawings, natively, into AutoCAD as PDFs, without converting them first. You can also import complete PDF files into AutoCAD as PDFs. Document Management: You can now open multiple files from multiple work spaces at once in a new Application File Dialog, for easy document management. Productivity Tools: You can now map the World's Most Trusted Trademarks to AutoCAD. Trademark search can be used with the new Rights Manager to review and keep track of the current status of registered marks, and trademark status notifications for registered trademarks. You can also manually register your brand names or personal trademarks. Annotations: You can now attach annotations to drawings and 3D models in a new contextual, workflow-based way. In addition, annotations created with annotations are now available in the same context, so you can update or edit them together. New Erase Color feature: Color eraser and ink eraser tools have been merged into a single tool called the Erase Color Tool. It has new features and is easier to use. In addition, you can now delete lines and curves by selecting them and pressing Delete. More Flexible Labeling: In previous releases, labeling tools and options were hard-coded.
