Looking for a HTML5 File API implementation for jQuery Mobile. I have been using jQuery File API v1.2.1 but the File Upload Progress seems to be very laggy (Browser freezes) for big files, so want to use something else. Any Suggestions? A: The File API is pretty straightforward. Just use FileReader and File and start uploading stuff. On load of the document, start reading the data. Example:

```
var reader = new FileReader(); reader.onload = function () { var url = reader.result,
```

```
document.body.innerHTML = url;
}; reader.readAsDataURL(file);
```

The problem with the File API in mobile browsers is that the JS implementation is not as reliable as in other browsers, so you might have to handle file upload manually.
