Portable application, and doesn't require any installation to function Possibility to set monitoring time in seconds, hours, or minutes Simulate downtime by checking the "Off" option Manually copy text when writing logs to file Keeps track of costs, and kWh/h Can monitor LAN computers as well Uninstalling option is available It's open source software The program runs fast and clean If you're interested in using this app for your computer's electricity consumption, then you're going to have to find out how much it's cost in order to keep your computer running, and Uptime Monitor can do the math for you A wide variety of power monitors are available today. Some offer you specific information about your device's power consumption, such as the number of watts in use and the cost of such power consumption. Others allow you to check online your device's power consumption, and monitor your devices' energy consumption over a certain time interval. With so many choices available today, deciding which type of power monitor to use may be a tricky task. We came across the interesting application Uptime Monitor, whose purpose is quite simple: to keep tabs on how much electricity you use to keep your computer active. This application is available for download for free, and it comes as a portable application on Windows, Mac and Linux computers alike. It should be noted that the application may use some of your CPU and RAM resources as well as some of your HDD space, so a computer with less computing power may run the application slower, and when it's active, the application will consume more power. Many power monitors are used to keep energy consumption under control for people who want to keep their computer on all day and get it to work without hitting problems due to electricity consumption. Uptime Monitor Description: Keep tabs on how much electricity you use for your computer's uptime, power consumption, and costs related to your computer's energy usage! Automatically checks the current state of your computer without registering anything.Keeps a log of your computer's state.And displays the result in real time. Portability perks and visual design First thing's first, the application can be run directly after download is complete, since it doesn't require an installation to function. This also means you can carry it around on a USB flash drive to check out uptime, and power usage on other computers as well, without worrying that stability is affected, since registries are not a dependency. The application stores all of its features in a clean window fitted in a classic frame, making things easy to comprehend from the first few seconds of use. Half of the main window is used to display a real time updating log, even though this means start and end times, as well as final results. Monitors uptime, and shows energy cost accordingly You can set monitoring time to be shown in seconds, hours, or minutes, as well as the number of decimals to use. When the process is active, there's the possibility to also simulate downtime by simply checking the corresponding option. For the whole process to be efficient, three fields need to be filled in accordingly. As such, you need to write down numerical values for your computer's in-usage wattage, standby wattage for downtime periods, as well as the price you pay for kWh. Since you need to keep the application, and your computer running if you want to reach a target time, it would have been useful to be able to monitor LAN computers as well. If you're interested in saving the log to file, you need to manually copy the text, because it's not automatically saved. A few last words All things considered, we come to the conclusion that Uptime Monitor can help you determine why your electricity bill seems to give you trouble. Setting up values only takes a few seconds, and you need to keep the app running for proper monitoring. It can't be used over LAN, but you can carry it around, since it's portable.
