In 1992, Autodesk introduced a design program for personal computers, Autodesk Design Review, which competed with Adobe Illustrator (Adobe's graphics program). Autodesk released the standalone version of AutoCAD Product Key in 1996. In 2001, Autodesk renamed the design program AutoCAD. In 2007, Autodesk released AutoCAD LT, its entry-level version of AutoCAD. AutoCAD LT is a part of the larger AutoCAD family of products. AutoCAD is used in a

wide variety of industries. Major AutoCAD users include the U.S. Department of Defense, the U.S. Navy, NASA, the U.S. Air Force, multiple universities, and numerous other organizations. Companies with AutoCAD use include Boeing, Corning Glass, General Motors, GAF Materials, Howard University, Lockheed Martin, Motorola, Northrop Grumman, Siemens, Staples, and Union Oil. As of 2011, the current version of AutoCAD is 2013. History A diagram of AutoCAD development. The first public release of AutoCAD

was in 1982 and was for Apple II computers running Apple's AppleSoft suite of Apple II-compatible software. In 1991, Autodesk introduced AutoCAD for Windows, which allowed computer users to run AutoCAD on any Windows PC. In 1996, Autodesk introduced AutoCAD LT, AutoCAD's entry-level version for the Windows platform. In 1997, Autodesk released AutoCAD for Macintosh. In 2001, Autodesk released AutoCAD R14, AutoCAD's first major revision since 1996. In 2007, Autodesk introduced AutoCAD LT,

AutoCAD's entry-level version for the Macintosh platform. In 2009, Autodesk acquired the original developer of the user-drawn line tool, Micrografx. In 2013, Autodesk announced a new version of AutoCAD for Windows, AutoCAD 2013. In 2016, Autodesk announced AutoCAD LT for Windows, Autodesk's new entry-level version of AutoCAD. In March 2013, Autodesk introduced AutoCAD for iPad, an iPad app version of AutoCAD. On June 19, 2014, Autodesk introduced AutoCAD Architecture, an architectural design program

for AutoCAD. In June 2015, Autodesk introduced Auto

Business applications for AutoCAD were initially developed in Delphi, and over the years they have evolved into full C++ applications with all the benefits of the.NET framework. AutoLISP is an interpreted language, so performance is very good. AutoLISP programs are compiled into binary, just like.NET and Visual Basic. These products have become

popular in the area of operations research and optimization. In 2009 AutoCAD business applications started appearing for Java-based operating systems. AutoCAD's original scripting language was called the Visual LISP (VLISP) scripting language, first released in Autodesk's AutoLISP version 4.0. In the early 2000s, Microsoft released the first version of Visual Basic for Applications (VBA) for AutoCAD. The VBA language is a general-purpose BASIC-like language. There are many automation or

customization applications based on this language. In 2008, Autodesk introduced AutoCAD's macro language for C++ and.NET, which runs on the.NET framework and is compiled to native C++ code. Macro is similar to Visual Basic.Net. In 2012 Autodesk introduced ObjectARX, a general purpose object-oriented programming language for C++/C#. AutoCAD, in collaboration with Red Hat, has developed Open Architecture Networking, an open source software project. AutoCAD Enterprise is based

on the open source project. Sketchup SketchUp is an open-source, 3D modeling and design software with similar functionality to AutoCAD. It was originally built as an AutoCAD plug-in for a few years. It was later rewritten as a totally separate product in 2008. At the time of its release, Sketchup was considered AutoCAD's main competition. Sketchup replaced AutoCAD LT. History AutoCAD was originally developed by the Canadian company MicroStation Corporation as CAD system to

be run on mainframes, and was known as CAD-10. In 1980, the original version of AutoCAD was named MicroStation. Autodesk purchased MicroStation Corporation in 1985 and renamed it AutoCAD. In 1993, Autodesk launched AutoCAD LT. AutoCAD LT was an up-to-date version of MicroStation, which meant that it would run on most platforms and hardware that MicroStation ran on. However, Autodesk did not support the new Windows ca3bfb1094

Update the software. by Bill Berkrot, USA TODAY Sports by Bill Berkrot, USA TODAY Sports Although it ended in a 6-6 tie against the New York Yankees on Sunday, the Atlanta Braves' seven-run ninth inning was more important than it seemed. Backed by a rain-

shortened 10th inning, the Braves took advantage of the rain delay with a tie-breaking two-run home run by Michael Bourn in the top of the ninth that sent the game into extra innings. Now with a chance to pick up their seventh victory in the last nine games, the Braves will have to survive a possible 10th inning if the Yankees can somehow pull off a two-run comeback against the Atlanta Braves. With the game tied at 6, Braves closer Craig Kimbrel entered with one out, two on and the bases loaded, and retired the

Yankees in order. With the Yankees 1-2-3 in the top of the ninth, Yankees starter Phil Hughes hit a leadoff single and pinch-hitter Adam Dunn walked to put runners on first and second. After a sacrifice bunt from Emilio Bonifacio moved up the runners to third and second, Braves second baseman Dan Uggla brought in Chris Johnson to face left-handed pinch-hitter Brian McCann. Despite having faced Johnson once before as a member of the Oakland Athletics, McCann was able to find a fastball that he

deposited over the centerfield fence for a solo homer. The Yankees challenged the call, arguing that McCann never made it to the plate. After a conference between the umpires, McCann was ruled safe as Johnson was tagged out at the plate. The Yankees took a 6-6 tie into extra innings. Game Notes Hughes allowed a season-high seven runs, while RHP Julio Teheran had a strong outing as the Braves improved to 10-9 in extra innings games.Q: Why is my example for a for loop failing?
