[Http://products/downloads/grandvj/nuvj-mod](http://products/downloads/grandvj/nuvj-mod).Identification of the hydroxylated products of water-insoluble collagen from anchovies (Lepidoptera, Pyralidae) by tandem mass spectrometry. Water-insoluble collagen (WIC) from anchovies was hydrolyzed and analyzed using hydrophilic interaction liquid chromatography and tandem mass spectrometry (HILIC-MS/MS). The fatty-acyl esters and fatty acids were then removed by enzymatic hydrolysis using lipase followed by treatment with acid and NaBH(4). The resulting products were analyzed by HILIC-MS/MS in the negative ion mode. HILIC-MS/MS chromatograms of the NaOH/H(2)O extracts were different from those of the methanol extracts. Characteristic hydroxylated products of WIC from anchovies were identified. The fatty-acyl moieties were linked to the amino acid by ether linkage with a hydroxyl group in the fatty-acyl chain. The fatty-acyl chain was hydroxylated at a position that was located in the fatty-acyl chain adjacent to an amino acid residue. The hydroxyproline residue was hydroxylated at the alpha-carbon of the amino acid residue. Therefore, the alpha-amino group of the amino acid residue was also hydroxylated. We also identified hydroxyproline in the products by matrix-assisted laser desorption/ionization (MALDI) and electrospray ionization (ESI) mass spectrometry. In addition, we detected hydroxyproline in the biosynthesis pathway of the WIC from anchovies.If this is your first visit, be sure to check out the FAQ by clicking the link above. Wouldn't it be a lot cheaper to have the injured player come to training camp for the first 3 days and do no contact, and then he starts regular practice? I mean, wouldnt that be cheaper than having the entire team camp f988f36e3a
