Sometimes I feature the images and I sometimes don't. Obviously, there are pros and cons to either way. When I do feature the images, I feel that I do a great service to the creator, that is, to you. If you read my reviews, you will notice that my opinion is always based on the merits of the review, or if there are no merits at all, the images are clumsy and poor rendering of what the creator is trying to portray. If I do feature an image, I do so because I feel the image is not bad, but few of them are good. This, of course, results in my negative reviews making the rounds. While some people will argue that I should appreciate everything, including the bad stuff, I have to firmly disagree. Being a perfectionist gives me a chance to be critical, but when I am reviewing, I not only look at the flaws, but everything, even the positives. For

example, in my review of the Komuro Campus, I was particularly pleased with the quality of this image, overall. I felt that the quality was superior to that of most of the images in The Best of 2018 that are made with Hasselblad cameras. That is not saying, though, that I don't appreciate the two phantoms that were created with the Apple Pencil. Frankly, I feel that these two images represent a huge leap forward for the technology. The downside of shooting with a DSLR is that the images are not as easy to edit as those made with with the Hasselblad cameras. While the latter are beloved by professionals, the former are not. I feel that the Adobe Lightroom is a really great application, but it lacks the capability of tracking the change of colors during image editing, like what we see in the Editor. If you want to record the actual change that occurs during editing, then you need Photographers Lightroom, which is still a beta application. Fortunately, Photoshop CC and Lightroom CC's speed has progressed a great deal. With the former, I can now develop my own lens correction and get all the results directly on the image, even if it is a profile created from the camera. I got slightly worse results when I shot with the Hasselblad camera, mostly due the way the meter that comes with the camera is designed. In case you have a Hasselblad camera, there is a specific adjustment that you need to do, so you may not want to jump to that conclusion. Photoshop does not have a Digital Photo Professional option, while Adobe Lightroom does. I found that it was easier to just go with the Hasselblad's software and export the raw files.
