fine structural cytology of Fc receptor-bearing lymphocytes in the lymph nodes of Sjögren's syndrome patients. Lymphocyte Fc-receptors are involved in a variety of interactions between the immune system and normal and neoplastic cells. The origin of macrophages in the lymph nodes and the biological implications of the Fc receptors on these cells are not well understood. In the present study we report a detailed ultrastructural investigation of the Fc receptor-bearing macrophages (Kp-2+ cells) in the lymph nodes from eight Sjögren's syndrome patients and from six control patients who had no demonstrable salivary gland involvement.

TESTIMONIALS "I truly love how the program helped me achieve a high test grade in my class. Your book truly explains concepts in a simple and easy to read manner.

Thank you again.

Eddie"REVIEW"Expertise and accuracy of instruction comes from having the author on the first seat of the classroom facing the students. Here the author takes on the role of the instructor, trainer, or examiner, and the students "studying" were able to see the author and hear his voice.

An excellent choice for classrooms, homeschooling, and all learning levels. I will

certainly look for more books from this author.

Kalani"REVIEW"Start Your Lessons in Italian, Lesson 6 is an easy, concise, and effective way to teach the Italian language. Very compact and effective.

Simmerine"REVIEW"Because this book takes you step by step through the entire lesson, it makes it easy to see the progression of learning. It has helped me learn Spanish much faster than before.

Parr"REVIEW"It was easy to understand, unlike other languages books I have learned before and it was the only one I could understand the words I learned. I will keep using this book in my class to teach languages.
