"Muse Dash is as simple as it gets. On your own, the game's numerous meters and indicators aren't all that clear. With guidance, however, the system makes sense. The hero can coast over certain areas and ease off the gas when entering a sudden turn. He also has control over the timing of which beats he'll sing, so the rhythm will never slip out of step. And if you don't feel like using the little directional pad to control the timing of the dance, you can simply listen to the music and keep time with the song by tapping the touch screen." PolygonMuse Dash Asks The Right Questions The World Is Waiting For "If you can imagine being blind-folded and having a pendulum thwack a series of musical frequencies against your eardrums, then Muse Dash is as close as you'll ever get to that experience. The question, of course, is whether that's an experience you want." Giant BombReview #3 For A Reason This Time It's A Circus Mood-Jumper "The performance gets more awkward and contrived as it progresses, with more and more characters and more and more exaggerated actions, but the gleeful artifice is part of the appeal of The Salesman. The in-game music is reminiscent of games like Guitar Hero and Rock Band and takes you on a musical journey across a stylized, cartoonish world." Eurogamer - 8/10 - "Music games often make the mistake of believing that if they add lots of detailed melodies and orchestral strings then the player won't notice when a level's building towards a dull climax. But the rise and fall of your 16 accompanying singers is part of the appeal here, as are the brief moments when Muse Dash evokes the joy of real music-making. And for once, it does a halfway convincing job of convincing you that you're actually working out what the composer is trying to say." "The early-to-mid-game track 'Brand New Day' starts off as a solid, bass-heavy ballad that doesn't quite work, while 'In Perfect Timing' never really does, but the voice acting and occasional bouts of manic laughter give it a charming edge that few games would ever dare."

2?Molecular mechanisms of the inactivation of natural killer (NK) cells: a possible modulation by cytomegalovirus and the NK activating receptor Ly49H. Natural killer (NK) cells are innate effectors of the innate immune system that are important for the elimination of virally infected or malignant cells. Activation of NK cells requires a balance of signals delivered by ligands of inhibitory receptors and activating receptors. As NK cell responses to their environment can have important consequences for the outcome of NK cell interactions with target cells, this article reviews the evidence for the molecular mechanisms that induce NK cell inactivation, focusing on the role of the viral major immediate early (MIE) protein encoded by the human cytomegalovirus (HCMV) and the function of the NK cell receptor
