Pc Sharma Pdf Free Download Pc - Get the latest and most popular The Engineering Handbook By Pc Sharma - Pdf Free DownloadQ: Keycloak - No SSL certificate details found in the request? I have upgraded my application to use keycloak and created a new application as a self signed cert (client, resource etc) with the following details (again I'm not an expert on this stuff, I basically followed the tutorials). I have created and enabled my keycloak server in the browser and also created a user etc... I'm making a request to the server with the following code: `urlConnection.getInputStream();` The response is: `{"errorCode":"javax.servlet.ServletException","errorMessage":"No SSL certificate details found in the request.", "javax.servlet.ServletResponse":{}}` To see what's going on I have logged the request and response and although I'm getting the correct response, the request isn't giving me anything useful to work with. I am using `URLConnection` with the following code: `StringBuffer encoded = new StringBuffer(); try { URL url = new URL(requestUrl); HttpURLConnection connection = (HttpURLConnection) url.openConnection(); connection.setRequestMethod("GET"); c6a93da74d`
