In general when you get new files from a transfer site it could contain some errors. Sometimes you can ignore them. For instance if the font is missing or doesnt look good you can ignore that. This is where you need the auto repair option. You can also use that to specify whether or not you want the repair to be "Undo-able". (You can save the file you are working with as a copy). More often that not, your rar file wont open if it is not compatible with your rar reader, in this case you will need to fix the rar file using something like WinRAR. Then open it in the Free upgrade type of compressor to check for updates. This can be done in WinRAR itself. Once your rar has been fixed, extract the font from it. There are various freeware application that can take the epub and create a simple xhtml document out of it. If you are having trouble with that, there are plenty of paid programs that can take the epub and turn it into html in short, this is really a very easy process, however do not be rushed. If the needed rar and font are not available, then wait a few days and the site will probably have them then. WARNING: the files you get will likely be corrupt, so be careful when unzipping/opening them. Doing so will likely cause loss of your bookmarks, notes, lists, saved position in your reading, etc. There are a great many converters on the market. I've listed a few popular e-book formats, such as EPUB, PDB, PDF, MOBI, AZW and others. Converting your Kindle book to other formats is a little more complicated, but not very difficult. The Kindle Converter for Mac is a free program that will convert your MOBI book to Kindle. See the complete instructions on the Amazon web site. *}, {"collapsed":false,"component_id":"yqs1pyq","id":"filemanager.collapsed","label":"Display","icon":"#icon-yqs1pyq","order":1,"size":40,"visible":true,"y":300,"x":650,"s":"Use font in actual document."},"i":"Display font in actual document.
