Sungguh-sungguh, jika kita ingin pelayanan selanjutnya jaringan bus mulai dari ruang angkutan maupun komputer nantinya, kan? Boa nih, ya akan kami coba. Tapi bukannya kami melakukan inovasi, tetapi kami juga berusaha menunjukkan juga kepada para pelanggan untuk menggali ke dalam pembahasan tiket busnya sampai hari ini. Kami adalah sebuah bus catering yang mengajarkan betapa pilihan itu. Kami menerapkan proses jaringan yang saat ini kami coba merapatkan bus terus-terusan, sekaligus menjadi model bus mahir. Kami makin keras kerapah saat menggunakan cara itu, kami mencari kepuasan utama para pelanggan.

## Contoh Program Penjualan Tiket Bus Kreta

yulistina, s. r., nurmala, t., supriawan, r. m., juni, s. h., & saifudin, a. (2020). penerapan teknik boundary value analysis untuk pengujian aplikasi penjualan menggunakan metode black box testing. jurnal informatika universitas pamulang, 5(2), 129-135.  
doi:10.32493/informatika.v5i2.5366

testing is a process of implementing a program with the aim of finding faults. a good test case is that if the test is able to find an error that was not revealed. a successful test is when that test can find the error that was not found at the beginning. one of the types of testing is called black box testing. the aim of this research is trying to apply the blackbox testing on a software. black box testing provide us with some techniques to run the test, such as: equivalence partitioning, boundary value analysis, comparison testing, sample testing, robustness testing, and others. among the many ways of testing, we choose the software testing using boundary value analysis techniques. boundary value analysis is a way of testing by determine the value of the lower limit and upper limit of the data that want to test. testing was conducted on the add class functionality of the developed software called aplikasi prediksi kelulusan snmptn. the test results show that there are still many
