We've spent a lot of time analyzing the user experience with the digital art tool which is what attracted our attention. Photo Editor has been updated with a new interface that, as in the past, gives you more control over adjusting your images. Overall, it's a nice improvement, but the software still needs some fine-tuning before it can truly replace Photoshop. (Poor) Photo Editor has some basic editing functions, like cropping and fixing exposure, but you really need to be in Photoshop to do any major retouching. Unlike your smartphone, Photo Editor won't save your tweaks, so you'll have to reload the photo in Adobe Photoshop before you can see those changes.

The biggest reason you'd want to use this app is for its digital canvas. In Photo Editor, you can select a large amount of pixels to work with and then easily zoom and pan across these sections. However, it's not always easy to find the area you want to tweak. You have to click to create a selection, which can be slow, and the brush tool is awkward to work with. Intuitive and powerful, the new Photo Flash Pro is a dream for those who want to create professional-looking HTML5 photo galleries. With a few clicks, it's possible to create gorgeous photo albums, share them on Facebook and Instagram, and even have them auto-generate with captions, titles, and keywords. Hovering the mouse over the preview for a photo allows you to edit various properties of the image. You can also easily add custom emoji or incorporate custom face beautifying features. In addition, Photo Flash Pro lets you use your own image and text as a background.

The new user interface is closer to lightroom's and other competitor's interfaces than to Photoshop. They call it direct access, which I don't think is a bad thing. Many other applications ask you for input for things they do. With Adobe Photoshop, it is immediate. You see the results immediately. So there are a lot of ways to improve. There are some really exciting new features that Adobe brought yesterday. We actually, for the first time, made sense of our long-term vision to improve the workspace for users. One of the big things we wanted to do was to make Photoshop more touch friendly and less keyboard dependent. So we brought in a new workspace that's designed to be hidden away so that you can look at your folders on your drive easily. We let you introduce new features easily without having to learn interfaces and ways to do things. With the suite editor, we're going to introduce real-time review and collaboration. Often you edit but don't want to save the file, you might feel that you've got to save it, but you've done a lot of work. We've already started working with our customers to enable real-time review and sharing of those edits within the workspace. Finally, we're going to be bringing higher-level content-oriented workflows to the suite editor and the desktop application. The new Adobe Professional Photoshop CC 2020 will feature a new, smarter Display Mode that lets users see what's behind a clone, in real time as they work. A brand-new Clone and Clone Stamp feature adds even more ways to create and edit multiple images that can be combined together in a single file. For designers, a new design area enables professional and personal collaboration without requiring the use of third-party tools. Also, a new focus tool, Auto-Crop, automatically allows users to accurately align both color and background elements, minimizing the effort it takes to refine their photos on any surface.
