 10 igg download . now you see me 2 movie  
 download in hindi Q: Reference: Is it true that an  
 automorphism of a group of exponent  $p$  is a  
 power of a single automorphism? Here is the  
 question: Given a group  $G$  of exponent  $p$ ,  
 i.e. with  $|g^p|=1$  for  $g \in G$ , does any  
 automorphism of  $G$  must be a power of a  
 single automorphism of  $G$ ? I'll start by noting  
 that the answer is "yes" iff  $G$  is abelian. This is  
 clear because  $\phi$  restricts to the identity on  
 $G/G^p$ . The "only if" direction of the question  
 is easy. The "if" direction is more interesting, but  
 I find it a bit tricky. Let  $x$  be a nontrivial  
 automorphism of  $G$ . Let  $H$  be the cyclic  
 group of order  $p$  generated by  $x$ . Then  $H$   
 is normal and  $G/H$  is abelian, so it must be  
 trivial, i.e.  $G=H$ . But  $x$  doesn't stabilize  $H$ ,  
 and  $H$  can't be the whole of  $G$ , either since  
 $G$  has exponent  $p$ . This seems to suggest  
 that  $G=H$ , but I don't see how to prove that for  
 $p>1$  (the case  $p=1$  is easy). Can someone  
 give a hint or a proof? A: Let  $A$  be a group of  
 prime order  $p$ . The maps  $\phi: A \rightarrow A$  such

that  $\phi(a^k) = a^{k+1}$  are bijections. Clearly these  $\phi$  are distinct automorphisms of  $A$ , and there are exactly  $p$  such  $\phi$ , because we have the recursive relation  $\phi(a^p) = a^p = \phi(a)^p$ . Thus, if  $A$  has exponent  $p$ , it has a bijection which is not a power of any single automorphism. Q: How to remove "unformatted line" in Android Studio
