Al parecer, los egipcios eran. Cellular origins of the interneuron-spindle coupling. Interneurons in the mammalian spinal cord excite muscle spindles, driving postural reflexes. This is thought to involve a direct electrical coupling. We have used whole cell recording in rat brainstem slices to examine the synaptic organization of the connections between spindle afferents and spiny stellate interneurons. Spiny stellate neurons are intrinsically active and receive gamma-aminobutyric acid-mediated synaptic input. Like spindle afferents, they are usually excited by nociceptive stimulation and even in the presence of a large amount of excitatory synaptic input, they can maintain regular firing. The spike timing of the spiny stellate neurons is most often delayed with respect to the muscle stretch and is modulated by a variety of inputs. Often spiny stellate neurons receive convergent EPSPs from multiple spindles and can discharge repetitively in phase with the ongoing muscle stretch. Spiny stellate neurons are recruited by spindle afferent activity and can increase their spike discharge frequency in response to synaptic input or even during ongoing bursts. Spiny stellate neurons have a rich synaptic input from multiple interneurons. These include a variety of interneurons that are themselves spindle-related, such as small diameter presynaptic inhibitory cells, and also numerous other spindle-independent, dendritic interneurons that differ from one another in their synaptic input patterns. We propose that spiny stellate interneurons act as a distributed amplifying circuit that conveys "secondary" information about muscle stretch and effort to motor neurons. These spiny stellate interneurons, in turn, recruit

motor neurons that control the muscle spindles. This circuit may also play a role in information processing by maintaining the firing of the motor neurons by driving their firing via their own intrinsic activity. A conservative and controversial new Christian high school has been backed by religious hardliners who oppose the expansion of religious freedoms in the state. The proposal for the state to license places of worship will be put to a public meeting in Sidney tomorrow, which is being presided over by the anti-abortion pro-lifers Operation Save America. They have emerged as the main group that is seeking to fight the same. They're opposing an organisation called Christian Coalition
